MICROFLOW™ PARTICLE SIZING SYSTEM

THE CANTY ADVANTAGE

The Canty MicroFLow™ has been engineered to offer the user a means by which a liquid is analyzed while under varying pressures, temperatures and flow rates. The MicroFLow™ offers sample or continuous, microscopic, non-destructive viewing and provides particle size analysis with two dimensional results when used in conjunction with the Canty Vector System and CantyVISIONCLIENT™ software. The vision system, with integral lighting, features precision optics designed to enhance the image prior to display or analysis. The image sensor is a high resolution / high speed CCD camera coupled to a microscopic lens system. The system offers zoom and focus ability, variable lighting, and multiple objective lens packages to cover a range of sizes. Our MicroFLow™ features the FuseView™ window as the product contact barrier. Unique fused glass windows far exceed all other glass windows in safety and performance. The fused glass provides a flush finish, without the pocketing found in other mechanical seals which disturb the flow pattern and particle distribution and can damage or deform particles.
