TRIPORT™ LIGHT/SIGHT GLASS SYSTEM

THE CANTY ADVANTAGE

Need more nozzle space on your vessel??? The Canty Triport™ fiber optic cold lighting system has been designed to provide efficient, high output light in a cost effective package by combining vessel viewing with an easy access port. We use only high quality fiber optic light bundles to guide the light from our light source through the sanitary sight glass connection. The light uses an elliptical reflector to focus true white light through an infra-red filter onto the fiber optic bundle introducing a very high intensity cold light into the vessel. The bundle tip covers less than 0.5 square inches of viewing area so it won't take up half of the view! All Triports™ feature the Canty Fuseview™ technology. Our unique fused glass windows far exceed all conventional tempered glass and metal to glass press fit windows in safety and performance. By fusing glass to metal, a high pressure, high safety, high safety, hermetic seal is formed. The fused glass technology ensures safety and cleanliness with every Fuseview™.
